Exchanges for SPEech ReseArch aNd TechnOlogies	
Porteur manceau : Anthony LARCHER	Laboratory: LIUM
Durée du projet : janvier 2021– décembre 2024 (48 mois)	Grant ID:
Call: MSCA-RISE	

Summary:
ESPERANTO is a collaborative research program based on a partnership between 15 academic and 4 non-academic partners, having complementary expertise and resources. The Esperanto project involves academic institutions leading the field of speech processing on 4 continents for decades and covering a large range of speech processing applications. ESPERANTO will contribute to the development of the next generation of AI; AI interacting with their users for better learning but also explainable systems: systems whose decisions are understandable by humans. In order to make these technologies accessible to the largest number of people, ESPERANTO will address applications with limited resources in the field of rare languages, robotics or education.
